## and Prospects--Furnaces and

# COPPER OUTPUT BREAKS RECORD

## Crop for June and the Half Year.

Nearly 6,000,000 Pounds Issue From Furnaces of the State.

Active Preparation for the Reduction of Greatly Increased Tonnages of Ore.

The crop of copper bullion for which the furnaces of the State were drawn upon during the month just ended reveals an output of that metal, every ingot of which was blended with units of silver and gold, amounting to no less than 5,200,000 pounds, the product of the same furnaces for the half-year ending with June disclosing a total of 30,400,000 pounds, with positive assurance that the aggregate for the year will be made to exceed 70,000,000. With this volume pouring from the plants at which the copperbearing ores are being reduced, the predictions made at the beginning of 1905 will have been more than realized, and yet this imposing total will have soon been overcome by the overwhelmingly greater one for which every company engaged in the mining and the reduction of ores from which it is derived are preparing. In support of this the preparation now being made for the smelting and milling of this class of ore affords evidence more conclusive, perhaps, than do the bewildering tennages that await the completion of this equipment. Not one of the plants operating upon these eres, indeed, at which enlargements are not projected, while in the American Smelting and Refining company's department of construction at this time are plans for a copper plant that shall be made to reduce as much as 2000 tens a day. Nor will the tremendous capacity of this, nor the enlargements with which the neighboring ones are to be endowed, exceed the draught that awaits them from the diggings. To the supply of ore, indeed, every shot is adding, while the output of mills now in commission and those to follow will add almost incredibly to the levy upon the furnaces. There are not a few who are of the opinion that the copper production of the State will be made to ultimately exceed the output of lead, of which 116,000,000 pounds was added to the supply last year. Undoubtedly the present production and the steady increase in the tennage of copper crea justifies the prediction. and gold, amounting to no less than 5, 960,000 pounds, the product of the same

#### BONDED COPPER CLAIMS.

#### Salt Lake and Nevada Mining Men in New Field.

New Field.

With samples of ore that certify to the presence of copper ore of very high percentages, B. F. Kelley, the expert mining man, came in from Lone Mountain, Nev, yesterday morning, and is at present walting on returns from the assayer before the final consummation of a transaction by which the locations will probably change hands. At present he is, with S. G. Westen of the Baltimore group of mines in the same locality, prospecting the ground under an option, and with good results. The main fissure on the property, which occurs in the porphyry, shows a width of ten feet between walls while occurring in this is about two feet of ore that affords from 25 to 49 per cent of the red metal, and of which shipments will be made as the option is being exercised. While the ore appears as a carbonate at this time, there is every assurance that this will be replaced by the sulphides as depth at which the change should take place is reached, as it has occurred in the neighboring properties. Upon the ground are springs capable of ample water with which to operate a furnace, which will be installed at once if developments shall justify it, while conditions generally are all favorable to inexpensive mining and economical reduction. It is the intention of the gentlemen to rush the work and to begin the production of ores as soon as possible.

#### BACK FROM BUTTE Enormous Tonnages of Ore Still Being Reduced Up There.

Herman C. Bellinger, manager of the Yampa smelter, Bingham canyon, came down from Butte, where an admixture of social engagements with a study of the latest methods in the reduction of the copper-hearing ores of that camp made his sojeurn as pleasant as it was instructive, yesterday morning, and during the afternoon departed for the plant, now doing its work with the efficiency of the older ones at which the metals are being recovered from the product of that camp. older ones at which the metals are being recovered from the product of that camp. Of the big camp of copper in the north with the big camp of copper in the north with the mines and furnaces of which he was for so long a time identified. Mr. Beilinger says its prestige as a copper producer continues undiminished, the volume of ore of which it is productive as enormous as ever, its volume of builion as great. With Bingham as a camp of copper, gold and silver. Mr. Beilinger has always been most favorably impressed, and that the output of the Yampa smelter shall be immeasurably increased the present season is an undertaking upon which he is determined

#### Coppers in Boston.

BOSTON, Mass, June 26.—Trading was very duil, with the exception of a little movement in Copper Range, which cold down to 681g and recovered a portion of the loss. The tradits were inclined to even up contracts and go away for the helidays. The closing was quiet. Hornblower & Weeks, brokers, 3 State street. Boston, and 10 Wall street, New York, furnish the following quotations:

bought and sold close is our whole secret.

Don't care who knows it.

Your grocer returns your money if you don't like

#### Slight Improvement in Market, With Better Days Nearing.

Better Days Nearing.

The month on the mining exchange closed on an output of 725,312 shares of stock, for which \$137,522.82 was paid, and with the condition perceptibly stronger, notwithstanding summer shrinkages in the volume of business. The day was a distressingly dull one, with the contents of the cash register reduced to \$2544.87, the transfers confined to \$10.100 shares. The raid on Lower Mammoth, the reports from which have not been without some iridescence, was the feature, the shares tumbling from 29 to 24 cents, while Carisa found litself back around 20 cents, with Shield going at 21½ cents. Yankee Con. which closes the mosth with another addition to its surplus, advanced to 40½ cents, while Uncle Sum ruled at 20 cents, and New York at 63 cents. Eagle & Blue Bell has finally begun to reflect the esteem in which lits is held by many and found an "open" market at \$1.65, while South Swansea came out to a bid of 4 cents, with Butler-Liberal hovering about 9 cents and May Day selling at 714 cents, the day and month closing on the following market:

#### Mr. Jackling Returns.

Mr. Jackling Returns.

D. C. Jackling, general manager of the Utah Copper company, has returned from Colorado, where he has been conferring with officials of the company upon matters pertaining to the claborate equipment for which plans are now being prepared by the company's mechanical engineer. Manager Jackling pleaded that there was nothing to be added to what has already appeared concerning the company's intentions, and that the campaign of construction will go along as off outlined.

## Local Investors Buy the Saturn

With Neighboring Territory It Will Be Made the Foundation for a Bingham Company.

Consummated in town during the day was a deal by which the Saturn mine at Ringham was acquired by Messes, P. J. Donohue, George L. Nye and Michael Clopenstein, the latter a resident of that camp, the vendors an English company Just what sum was involved in the transaction the purchasers could not be induced to disulge, but it was undoubtedly augmented by the rivalry which has been going on for some time by the several who sought it. The territory adjoins that of the Nast, which has for many years been productive of a good quality of ore, and with the Saturn, Jupiter and several other locations will be made the foundation for a new company to be organized without delay, said Mr. Donohue Equally as productive has been the Saturn and Jupiter, the fissures by which they are traversed having yielded a considerable formage of lead and silver ore, while extending through each is the bedding plane, in which occur the exhaustiess deposits of the camp. To inaugurate the work Mr. Donohue will leave for the diggings this morning. Just what sum was involved in the trans-

#### ACTIVITIES AT FAY.

Fresident Weir of Nevada-Utah at Pioche Mines.

Special to The Tribune.

FAY, Nev., June 30.—From parties who have returned from attending court at Pioche it is learned that the old camp is picking up very rapidly on account of the operations of the Nevada-Utih Mining company and Messrs Scott and Miller, who have several enterprises moving successfully. Ed Freudenthal is superintendent of the Nevada-Utih properties under Manager Milliken, and is getting the preliminaries in shape for an active campaign as soon as the details are decided upon by Col. Weir, the president of the company, who is now at camp. The old Meadow Valley No. 5 shaft will be used to develop the famous old ledge which turned out its millions through the different Meadow Valley mines, the Raymond and Ely, Yuba and other properties. The old engine is being replaced by a smaller one of more modern make, which will be used for all the preliminary work of retimbering and sinking to the 300-foot level. It is intended to do all Special to The Tribune. work of retimbering and sinking to the 3000-foot level. It is intended to do all work of retimbering and sinking to the 300-foot level. It is intended to do all the work of development for some time through the Meadow Valley No. 5 shaft as it has been found to be in good condition. All the machinery on the different properties has been condemned and will be replaced by new machinery wherever it is necessary. Among the plans for future development that will be definitely decided upon while Col. Weir is in campare the completion of the railroad from Caliente and the establishment of a power plant in the flat east of Pioche. On the several Scott and Miller properties work is being pushed at a rapid rate. At the Abe Lircoin the mill is patting through twenty-live tons per day of \$5 ore and making a high-grade concentrate for shipment, while the Holderman plant is successfully extracting the gold values from the tailings. There are thirty men at work at the plant.

On the North Pole property a good-sized force is at work running a 50-foot-sized for shipped a 50-foot-sized force is at work running a 50-foot-sized force is a foot-si

is successfully extracting the gold values from the tailings. There are thirty men at work at the plant.

On the North Pole property a good-sized force is at work running a 359-foot tunnel and a larger force will be added soon to put down a big shaft to the 100-foot level. This is the property of the new Boston-Ploche Mining company that has just been organized by Scott and Miller.

The Mendha is being developed through a winze from the tunnel level and a two-foot streak of good ore is being made to give up its riches to be shipped to market. Cook and Lloyd and Tom Osborne are doing the work at the Mendha and expect to keep a number of men at work for some time.

Bullionville is to be revived through the operations of the Godbes and J. L. Hackett of Louisville, Ky., who has purchased an interest in the tailings there. They will run through the big pile which averages file per ton, by a new process and expect to make a saving of 35 per ton on the 170.000 tons they have there. They will also work over the pile of inilings that still remain at the old milliste in Dry valley, east of Ploche which are richer than those at Bullionville.

Here at Fay conditions continue to look brighter, for new faces are seen every day or so and all are looking for good mining properties. Some new deals are in the air, and no doubt will materialize in a time. W. R. Pearson, a California mining man, has been here for a week past and has made a close study of the conditions. He was well pleased with what he saw, and will no doubt get a foothold in the camp at no distant date.

The strike at the Homestake at Deer Lodge continues to improve, the last sample giving an average of \$145.50 in gold. This is from four feet of vein matter.

Capt. D. R. Kilbourne is expected in camp from Los Angeles in a few days.

matter.
Capt. D. R. Kilbourne is expected in camp from Los Angeles in a few days, and will be accompanied by friends who expect to do business in the district.

#### MR. LAWTON RESIGNS.

#### Relinquishes Superintendency Here

for Position Elsewhere.

Quite unexpectedly Charles Lawton, who was induced to leave his moorings among the mines of Michigan some time ago to accept the superintendency of the Bingham Con.'s cluster of Bingham bonanzas, has sought his release, and early next week will, with his family, depart for the copper-bearing regions of the north again. That it is compelled to lose his services the management very much deplores. Not only, said Capt MacVichie during the afternoon, has Mr. Lawton labored diligently in behalf of the big company, but with the most intelligent results, while a chapter of splendid achievements under ground afford evidence of his skill as a miner. Mr Lawton appreciates that in terminating his connection with the Bingham Con, he is severing it with one of the biggest and most interesting of America's camps of copper, but in the change his interests are promoted. In this State he has, by his democratic ways and unprecintious course, made many friends, who promise him cordial treatment on his visits.

Positively cured by these Little Pills. They also relieve Distress from Dyspepsia, Indigestion and Too Hearty Eating. A perfect rem-edy for Dizziness, Nausea, Drowsiness, Bad Taste in the Mouth, Conted longue, Pain in the Side, TORPID LIVER. They regulate the Bowels. Purely Vegetable.

SMALL PILL, SMALL DOSE, SMALL PRICE

## A Big Increase in Metallic Wealth

Settlements for June and Six Months of 1905 in the Ore and Bullion Market.

June in the ore and bullion market losed on settlements amounting to \$2,-165,000, the aggregate for the six months nding last night \$12,702,900, with everything to foretell bigger figures during the thing to foretell bigger figures during the lest half of the year. In these settlements is not included the value of copper buillon containing silver and gold, which has poured without interruction whatever from the various furnaces of the copper plants, and from which latter source the world of metallic wealth is deriving many millions. While the exhibit is one that cannot but favorably impress those who have invested their money in the diggings of this commonwealth, it will undoubtedly be exceeded by settlements that shall characterize the remainder of the year. At each of these plants a larger tonnage of ore is being produced at present than at any period since their operation was begun, and, with preparations now in progress, July will undoubtedly come forward with another record.

other record.

The day's settlements in the open market amounted to \$72,600, McCornick & Co.
reporting them as they follow: Bullion,
33,760, gold, silver, lead and copper ores,
\$23,900. In the metal market silver ruled at 554 cents an ounce, lead at \$3.5004 50 per cwt. with casting copper stationary at 144 cents a named

#### MINING MUCH SALT

Big Deposits Out of Salina Scene of Much Activity. Special to The Tribune.

Much Activity.

Special to The Tribune.

TROPIC, Garfield county, Utah, June 20.—Three miles from Salina, in a region resembling the "Bad Lands" of Dakota, is an immense deposit of galine rock, nowered with the silt and debris of centuries, and partially covered with the silt and debris of centuries, and partially from the west to the east outcroppling in a number of places, and partially covered with a reddish-brown earth that characterizes this part of the country. The hills surrounding this monograph of some long-lost sea, are of most fantastic formation—unshapely, barren, welrd, as if the face-cloth had lifted from a fever-stricken earth.

Two salt mines are in operation here. At the Jonnings mine a great frame scaffold rises above a well-sunk shaft 6x3, itted with whim and safely timbered to a depth of seventy-five feet. The shaft is in salt every inch of the way, but no hoisting is being done. A short distance away is a quarry of solid salt rock. An immense body of salt reaches up the quarry side to a height of fifty feet, reliecting myriads of colors as the light strikes it. At the Frauden mine, near by, the conditions are much the same, both quarries being systematically operated.

In the Jennings mine, the management has an arduous task to cope with in the mud and water. A dlich has been constructed into which the water can be pumped and carried away, but this has been a laborlous and unsatisfactory plan, and the intentions are to drain the quarry by running an incline drift from a sufficient depth into the adjacent shaft, where the water may find an outlet by scepage or be pumped to the surface, thus leaving the quarry clean and dry for the blosting and londing of salt rock. From 24,000 to 10,000 pounds of rock is shipped every day. This is sold mostly to cattle and sheepmen at \$1 or \$5 per ton. At Redmond, a town near by, it s a case of "come over to the butcher-shop and have a frappe." for the proprietor, more enterprising even than Jacob Mortiz or Franklin, dispenses hard and soft drinks on one sid

AT THE BLUE BELL. Ore Bodies Now Providing Sinews for Systematic Development.

Of conditions at the Tintic properties of the Eagle and Blue Bell Mining company, Manager MacVichle, who returned from camp yesterday, says that while has not begun the stacking up of means with which to pay dividends that from an output of eighty tons daily he is desirable the receiver the receiver with which to demonstrate the receiver with which to demonstrate the receiver with which to demonstrate the receiver with the feeting the receiver the receiver with which to demonstrate the receiver an output of eighty tons daily he is deriving the means with which to demonstrate its resources and to determine
whether or not it is one of the big mines
of a big and most productive district. At
present he is devoting much of his energy to dispatching work on the 1600-foot
level, and expects to connect with the
ore-bearing channel within 100 feet from
the breast of present workings.

Hon. Henry N Sweet of Hoston, who
has been an adherent of Bingham Confor a long time, accompanied Manager
MacVichie through the Blue Bell, and
with the ore bodies to which his attention was drawn was most favorably impressed. With the result of his visit to
the company's furnaces, he was also very

the company's furnaces, he was also very much pleased. The ease and the dispatch with which a ton of builton is produced was a revelation to him. This morning he will depart for the company's system of mines at Bingham, after which he will leave for the north.

#### THE DIVIDEND RECORD. June Distributions in Diggings Approach Total of \$300,000.

During the month just brought to a close the breadmakers of this State distributed in dividends no less than \$278-000. The procession was headed by Silver King of Park City, which came forward with \$100,000, while the Horn Silver of Frisco presented its adherents with 5 cents a share, or \$40,000, As a quarterly distribution the Daily West of Park City came forward with \$100,000, the Con. Mergur following with \$25,000 and the Uncle Sam with \$5000. July opens with the assurance that the record of all previous time will be broken by the stupendous amounts that are to be presented to the investor, and which will have before its close reached at least \$1,100,000.

#### NEW TABLE IN TOWN.

Another Machine for Concentration of Low-Grade Ores.

In his workshop on Second South, Vivian P Strange during the day entertained not a few of those interested in the concentration of ores, with demonstrations on new table—or an improvement on one that has done good service as originally designed. In demondirating its efficiency concentrates from the Ohio Copper company's Bingham mill were brought into requisition, and to those who witnessed it the work of the machine was apparently most satisfactory. Its feature is the triple-deck, the metals that are not recovered on the first passing over the subordinate ones until there is little to be found in the tailings.

#### SECOND EXCURSION NORTH

Via Oregon Short Line,

Saturday, July 1. Greatly reduced rates to Northern points. Liberal lim-its allowed. See agents for full particulars. Excellent fishing in Idaho

#### JULY 4 RATES

Via Oregon Short Line. Tickets on sale July 3 and 4, limited to July 5. See agents for full particu-lars. City Ticket Office 201 Main St.

## Nippeno's Diggings Show Much Ore

Latest Advices From Southern Camp Indicate Tremendous Rush Into Region.

Of G. R. Cleaveland, who fled from the thrill of urban life several weeks ago to seek a bonanza along the margins of the San Pedro. Nippeno, the new camp in southern California, has made another captive and when he returns it will be with the deed to one of the camp's most meritorions discoveries, that was recently acquired by him. In a letter to Col. Tom Pitt of this city. Mr. Cleaveland writes that the camp is undoubtedly one of the liveliest of the cluster which is now contending for the mastery, and that the rush into it is hourly increasing the population. Among the arrivals are miners from all the camps in Nevada's districts of gold and silver, those who have had time to fathom conditions at Nippeno pronouncing it as good as any and superior to the average. Of these many have staked off claims and inaugurated work, while in Mr. Cleveland's nequisition he has at grass roots four feet of ore, the assays from which certify to an average of 30 per cent lead, with 3 ounces silver and \$5.90 gold per ton. It is this upon which active development will begin at once. captive and when he returns it will be

In the first number of the Times, a new

which active development will begin at once.

In the first number of the Times, a new publication which has made its appearance in the district, appears the sub-loined concerning the region and its atructure:

Wherever the prospector has gone within a radius of ten miles he has come in contact with good mineral-bearing ore. The deposits are of enormous size and the remarkable feature is the great outcrops that show assay values of from \$6.40 to \$560 to the ten. The Times has no hesitancy in making the prophecy that the Crescent deposit will be a greater producer of the veilow metal in the next six months than Goldfield and will outshine Bullfrog district as the destined haven for capital to seek returns on its display of confidence. Conceive, for instance, a porphyritic quartzite outcrop 600 feet wide and 2000 feet long assaying from end to end and from side line to side line from \$8.60 to \$240 per ton, picked samples soaring into the thousands of dollars per ton. The Las Vegas Times, some six weeks ago, prophesied that the people of southern Nexada were upon the threshhold of one of the greatest mining sensations the world had ever known, and the Crescent district verifies this confident statement. Of course, at that time, these indications were not definitely located at Crescent, but in its neighborhood.

In addition to the enormous dyke particularly mentioned there is a continuation of the same character of mineralized deposits for miles around. No depth has been attained upon any of these discoveries but from all indications considering formation, there is no question as to depth. This is further substantiated by the fact that the Searchlight mines belong to the same mineral zone, and in mining parlance these grow richer as they attain depth. The Searchlight formation is similar.

Clarence K. McCornick came in from the East during the afternoon, after a conference with Bingham Con. directors in Boston, and will be followed by Hon. W. S. McCornick on Sunday. Having consummated the deal that took him into southern California, Frank Wil-

him into southern California, Frank Wil-son of the Johnnie Mining company, in whose behalf the purchase was made, is scheduled to return tomorrow with full Robert Mulhall has returned from Alto

where he visited among others the Pitts-burg. He reports a large amount of ore exposed and says that the property will undoubtedly be made very productive as soon as transportation can be provided for its ores.

Manager Hatfield of the Albien mines at Alta said yesterday that the tunnel would have to advance but seven feet further to reach the objective point and a connection with the old ore-bearing channel which was productive of so much mostly above. wealth above.

During the month the management the Columbus Con. of Atla reached the smelter with 475 tons of concentrates and 400 tons of first-class ore. The output enabled the management to add a consid-erable amount to the surplus while at the surface and in the bins there re-mains at this time 1500 tons of crude ore and concentrates awaiting shipment.

MAN CANNOT LIVE BY BREAD ALONE-AT LEAST NOT BY POOR BREAD.

## **HUSLER'S FLOUR**

MAKES GOOD BREAD.
